Wasem Khalifa CIS Student | Software Development

wkh112006@gmail.com +963954343673 Damascus Waseem Khalifa

ABOUT ME

IT student specializing in software engineering and mobile app development using Flutter. Experienced in building responsive user interfaces, integrating RESTful APIs with PHP & MySQL backends, and database management. Seeking to provide practical software solutions that combine high performance with a seamless user experience

Damascus

EDUCATION

Diploma in Computer Information Systems (CIS), *UNRWA DTC* 10/2024 – 07/2026 | Damascus

High School Certificate, *Al-Saada Private High School* 09/2021 – 06/2024 | Old City of Damascus

SKILLS

Mobile Development:
Flutter & Dart

Front-end Development
HTML, CSS, JavaScript
React.js
Translating Figma designs into clean and semantic user interfaces

WordPress

Other Tools: Git/GitHub, Systems Analysis, AI Tools

Soft Skills: Time Management, Working Under Pressure, Teamwork & Collaboration

UI/UX Design:
- Figma

Backend
- Laravel
- Python
- ASP.Net core
- MYSQL
- SQL Server
- C#

AI Tools
Gemini, Antigravity, Google Flow.ai ,ChatGPT, Claude

Productivity Tools: Microsoft Office Suite (Word, Excel, PowerPoint)

LANGUAGES

Arabic: Native | English: Professional Working Proficiency

PROFESSIONAL EXPERIENCE

Trainee UNRWA Headquarters, *Technical & Software Support* 07/2026 – Present | UNRWA
Technical and software support.
backend, website, and mobile application programming and development.

PROJECTS

Smart Tank (Graduation Project), *An IoT-based application built with Flutter and Laravel for real-time tank monitoring. The system reads sensor data to continuously display water levels and sends instant alerts to users via Firebase to ensure efficient management*

SolarMate, *A mobile application for calculating solar energy loads. Developed using Flutter for a cross-platform experience, with a PHP backend and MySQL database. Includes an administrative dashboard built with Laravel for data and user management. Facilitates estimating solar panel requirements and energy consumption, supporting the design of efficient and sustainable solar systems.*

Warehouse Management App,
Developed a warehouse management application using Python and SQL to track inventory, stock levels, and orders
